3. Sample order delivered within 24 hours , order lead time within 7-15 days, We will give corresponding compensation when overdue deliver the goods.
4. All items must be returned in their original condition, in order to qualify for a refund or exchange of goods.
5. The buyer is responsible for all shipping costs incurred. Please contact us before leaving any negative or neutral feedback . we will work with you to solve any problems.

The Car Charger Is Slow To Charge. What Can I Do If I Don't Charge It?

First of all, the car's cigarette lighter is a key point to pay attention to, many owners often use the car charger directly after the car charger pull out, did not cover the car's cigarette lighter, long-term in the past will lead to the car's cigarette lighter Wear, erosion, resulting in poor contact between the car charger and the cigarette mouth, affecting the use of the charge.

Secondly, after many times of plugging and unplugging, the hardware components of the plugs of the car chargers are greatly worn out, and some even appear to have reduced plug elasticity, which leads to poor contact between the plugs and the cigarette outlets. This is a big problem. The cause of this problem is often because the quality of the car charger is too low. The flexibility of the hardware of the plug is too poor. After several times of plugging and unplugging, the elasticity cannot be restored enough. When the plug is inserted into the cigarette holder, the elasticity is insufficient. Can not effectively contact with the cigarette mouth, resulting in poor or even tight plug.

Finally, the charging current of the car charger does not match the current of the charging

device, which is an important factor affecting the charging effect. Many car owners do not understand the charging current very well, so it is more convenient to choose the car charger. For example, the iPad's original charger is 2A, but if you choose to use a 500mA or 1A charger for charging, then the charging speed will certainly become very slow, even if your charger is new; there are owners in pursuit of charging speed. With chargers larger than 2A using 2.5A or 3A or higher chargers, although the charging speed may be faster, there is a safety risk.

So, what should we do about the slow charging of car chargers? Through the above analysis, we can understand that when choosing a car charger must pay attention to the quality of the product, do not plan cheap, especially the kind of three no products, can not get effective quality assurance, and even security risks. Therefore, it is recommended that the owner of the car must choose a regular factory when choosing a car. The car charger of a well-known brand rarely has such a problem, and there is a need to make a selection according to the needs of its own charging device. Speed and charging safety are guaranteed.

FAQ

Q1.Are you factory ?

Yes, we are professional manufacturer, OEM & ODM is welcomed.

Q2.I'm looking for some products which is not shown on your website, can you make me the special order?

We value our cooperation between us. so, if you can show us the picture of the produce you need, our efficient co-workers will spring out to deal with your order. Our factory will speed up for your special order.

Q3.Can you offer sample before order?

A: Yes, we can provide free samples for evaluation, you only need to pay some freight.

Q4.What's the MOQ?

MOQ is 200pcs, mix colors are accepted.
